Pasture King® is a versatile, high analysis compound granular fertiliser designed for multi-purpose pasture production.

Key nutrients contained in every granule of Pasture King® include; Phosphorus, Sulphur and Calcium, all of which are important in productive pasture production.

Pastures get an immediate boost from the sulphate sulphur contained in Pasture King®, which is readily available to the plants.

Pasture King® provides easy storage and handling and flows easily through spreading equipment. Liquid trace element application is common with Pasture King® and often used as a blend with Sustain [S90] to lift sulphur levels. Common blends include Pasture King® SS9, SS13 and SS17.
